                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequences T79063-66 represent novel allelic genes of the Xenopus laevis melatonin receptor MEL-IA. The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a long form of the novel receptor MEL-IAb also known as Mel 1-c(beta). As compared to the short form (779066), the difference occurs in the 3 untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MEL-IAb sequences also differ from known MEL-IA receptor sequences by 5 amino acids. The nucleotide sequence was isolated from cDNA derived from xenopus skin RNA and amplified using the primers T79067-75. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-IAb has been shown to modulate intracellular cGMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodicsterase, but unlake MEL-IAA (179063) cannot inhibit adenviy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer

The gene has been cloned by polymerase chain reaction amplification of human genomic ENA, using primers derived from the Xenopus laevis melatonin receptor sequence (T09947), and use of the product as a probe on a human genome library in phage EMBL-3 under high stringency. The 5'-portion of the gene has been obtained by reprobing the DNA library at low stringency, and the complete sequence is given in T09950. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-antagonists. Agonists may be used as receptor-agonists circadian hythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence encodes a fragment of a human high-affinity melationin-la receptor, which is a membrane protein, coupled to quanthe nucleotide binding proteins (G-proteins). The coding sequence corresponds to the region downstream of the first intron
                                                  as a model system to screen agonists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
sequences encode the same protein), which is thought to affect the half-life of the mPNA. The nucleotide sequence was isolated from cDNA derived from Xenopus skin RNA and amplified using the primers T79067-75. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-1Aa has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular CGMP, esp. inhibiting its accumulation induced by an inhibitor of
                                                                                                                                                                                                                                                                                                                          2 C-terminal amino acids encoded by these sequences are different from the previously known proteins. This sequence is a short form of the novel receptor MEL-lad also known as Mel 1-c(alpha). As compared to the long form (T79063), the difference occurs in the 3' untranslated region (both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequences T79063-66 represent novel allelic genes of the Xenopus larvis melatonin receptor MEL-1A. The sequences encode proteins which are 65 amino acids shower than those described in the prior art. Also the lar

                                                                                                                                                                                                                                                                             Bost
                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                               sequences encode the same protein), which is thought to affect the half-life of the mRNA. The nucleotide sequence was isolated from cDNA derived from xeopus skin RNA and amplified using the primers T9067-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-laa has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular cMMP, esp. inhibiting its accumulation induced by an inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                        common actors where the model by these sequences are different from the previously known proteins. This sequence is a long form of the novel receptor MEL-lam also known as Mel 1-c(alpha). As compared to the short form (17904), the difference occurs in the 3 untranslated region (both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences T79053-55 represent novel allelic genes of the Xenopus laevis melatonin receptor MEL-1A. The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. Also the la
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mRNA; half-life; skin; amplification; primer; polymerase chain reaction; transmembrane domain; cellular signalling; inhibition; adenylyl cyclase; modulation; intracellular; cyclic GMP; inhibitor; phosphodiesterase; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human melatonin receptor sequences. Perceptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-atagodists. Agonists may be used it therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control cyclation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic business for the receptor gene may also be expressed in a transgenic business for the receptor gene may also be expressed in a transgenic

The receptor is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins). The cNNA has been cloned from Xenopus dermal melanophores, and expressed in Escherichia coli Flanking DNA sequences of the 1st 2 Met codons both display a Kozak consensus sequence for initiation of translation. The Xenopus sequence has been used for isolation of honologous sheep, mouse and break relations to the content of the consensus sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ODS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a canine growth hormone secretages in receptor (GHSR). The GHSR CDNA sequence was isolated from a canine chan library constructed from speen. The GHSR polynucleotide is a source of probes and primers, which can be used to isolate GHSR amones from other species. It is also used for recombinant expression of the polypeptide. The GHSR polypeptide is used in assays to identify agonists, antagonist and inhibitors, such identified ompounds can serve as leads for the development of veterinary pharmaceuticals that can be used to treat dogs having linesses in which improved that can be used to treat dogs having linesses in which improved the cartivity of the indice of the first for diagnostic and be proposed to present of the proposed of the cartivity of the indice of the diagnostic and the polypoptides may also be added to treat and the former can be considered. The proposed is the cartivity of the indice of the proposed to present of the proposed to present dogs having the cardiocal and the polypoptides may also be added to treat and the proposed to present dogs having the proposed to present dogs have the present dogs h
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Σ.

sepretable The protein may also be administrated for purposes of amplifying the net effect of a growth hormone secretagogue by providing downstream signalling and diminishing the required dosage of growth hormone secretagogue, or diminishing the effect of an overdosage of a growth hormone secretagogue during therapy. The protein may also be used to screen and identify compounds which bind to it. Such compounds are used in the treatment of conditions which bind to there is a shortage of growth hormone observed in growth hormone deficient children, elderly patients with musculoskeletal impairment and those children, elderly patients with musculoskeletal impairment and those
                                                                                                                                                                                            receptor. The protein, preferably immobilized on a solid support, may be used diagrastically for the determination of the recentration of growth hormone secretagouss, or its metabolities in physiological fluids, e.g. body fluids including serum, and tissue extracts, as for example in patients who are undergoing therapy with a growth hormone in patients who are undergoing therapy with a growth hormone.
                                                                                                                                                                                                                                                                                                                                                 New receptor useful for determining the elementative of alouth hormone secretagogue or its metabolites in physiological fluids and for amplifying or diminishing the effect of growth hormone secretagodue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse: growth between secretaring to reprint growth between secretagodue; growth hormone; growth hormone deficiency; musculoskeletal impairment;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total smore distribution.
